CONDITIONAL ACCEPTANCE

WHAT THIS MEANS

This delivery is functional and can be accepted once the items under "What needs attention" are addressed. Everything else has been verified.

● 8 verified

● 5 advisory

● 5 to address

● 18 checks total

Delivery readiness at a glance

Builds & installs reproducibly	Missing	Automated tests present & passing	Ready
Setup is documented (README)	Ready	Deployment / CI is defined	Missing
Backup & recovery documented	Partial	Operational guidance (health, runbook)	Missing
No exposed secrets	Ready	Ownership & license are clear	Missing

What needs attention

Dependencies are locked

RECOMMENDED

Commit a lockfile or a fully pinned reproducible dependency set.

Container build is defined

RECOMMENDED

Add a deterministic container build or document the supported deployment artifact.

Environment contract exists

MUST FIX

Add a secret-free .env.example documenting every required variable.

Ownership is documented

RECOMMENDED

Document code ownership, operational owner and escalation contact.

Runbook and rollback guidance

MUST FIX

Document startup, shutdown, rollback, incident and escalation steps.

Where this delivery stands

The bar shows the measured delivery risk on the acceptance scale — lower is better. The marker is this delivery.

Category readiness

Detailed findings

Dependencies are locked

Build · high

FAIL

None of the expected files were found: uv.lock, poetry.lock, requirements.lock, Cargo.lock, package-lock.json, pnpm-lock.yaml, yarn.lock.

Remediation: Commit a lockfile or a fully pinned reproducible dependency set.

Dependency manifest exists

Build · info

PASS

Found pyproject.toml.

Database migrations are versioned

Data · medium

WARN

No migration directory was detected. This may be valid for a stateless project.

Remediation: If the service has persistent state, add versioned migrations and rollback guidance.

Backup and restore are documented

Data · high

WARN

No backup or restore documentation was detected.

Remediation: Document and test backup/restore, including RPO and RTO expectations.

CI workflow exists

Delivery · info

PASS

Found .github/workflows/ci.yml.

Container build is defined

Deployment · medium

FAIL

None of the expected files were found: Dockerfile, Containerfile.

Remediation: Add a deterministic container build or document the supported deployment artifact.

README exists

Documentation · info

PASS

Found README.md.

Environment contract exists

Environment · high

FAIL

None of the expected files were found: .env.example, .env.template, env.example.

Remediation: Add a secret-free .env.example documenting every required variable.

Ownership is documented

Governance · medium

FAIL

None of the expected files were found: CODEOWNERS, .github/CODEOWNERS, MAINTAINERS.md, OWNERS.

Remediation: Document code ownership, operational owner and escalation contact.

License is explicit

Governance · info

PASS

Found LICENSE.

No oversized repository artifacts

Maintainability · info

PASS

No files over 20 MiB were detected.

Unresolved work is visible

Maintainability · info

PASS

No TODO/FIXME/HACK markers were detected.

Health/readiness signal exists

Operations · medium

WARN

No health/readiness implementation was detected.

Remediation: Expose health and readiness checks suitable for deployment automation.

Structured logging evidence

Operations · medium

WARN

Structured logging or request correlation was not detected.

Remediation: Add structured logs and request/job correlation identifiers.

Runbook and rollback guidance

Operations · high

FAIL

No runbook, rollback or incident-response guidance was detected.

Remediation: Document startup, shutdown, rollback, incident and escalation steps.

Timeout/retry/idempotency evidence

Reliability · high

WARN

Resilience controls are missing or weakly documented.

Remediation: Define timeouts, bounded retries and idempotency for side-effecting operations.

No obvious committed secrets

Security · info

PASS

No obvious high-confidence secrets were detected.

Automated tests exist

Testing · info

PASS

Automated test sources were detected.

Technical appendix — decision proof

This section is for technical reviewers. The verdict above was produced by the Calybris Core decision engine and is cryptographically reproducible — anyone can replay the inputs and confirm the same result.

Engine	calybris-core
Replay verified	● true
Selected candidate	2 (1=ACCEPT · 2=CONDITIONAL · 3=REJECT)
Policy digest	a022ff000a2af53b13b1...
Input digest	b295410b97d5319f193a...
Decision digest	88f95b4bd56e7e90ba61...

Rationale: Calybris selected candidate 2 (action=substitute, reason=alternative_maximizes_utility). Candidate 1=ACCEPT, 2=CONDITIONAL_ACCEPTANCE, 3=REJECT. Audited policy=python-saas-v1@1, effective_risk_bps=5080.

Technical appendix — evidence & verification

Repository source	https://github.com/emirhuseynrmx/price-monitor-pipeline
Policy version	1
Handover policy digest	8edde23252224963fadf...
Branch	main
Dirty working tree	true
Evidence digest	b937fd9cadbae7b32da7...
Report digest	68177de390cb4d0a5fe2...

How to verify this report

Anyone can confirm this report has not been altered by running `calybris-handover verify handover-report.json` against the machine-readable JSON — it recomputes and matches the canonical report digest above.
